

How to install and configure Fortinet fortiVPN client

STEP 1 – Download the latest version available here →

https://www.ipconnectx.ca/rmm/FortiClientVPNOnlineInstaller_6.4.exe

(newer version may be available so make sure to check the knowledgebase as we will update the link from time to time)

STEP 2 – Open the FortiClient console and click on Configure VPN

STEP 3 – make sure to check all the check marks (red arrows pointing at them) and fill in the info inside the boxed (marked by red boxes). All the required information should be provided by our support team member. Don't forget to click Save at the end.

FortiClient

File Help

FortiClient VPN

Upgrade to the full version to access additional features and receive technical support.

New VPN Connection

VPN: **SSL-VPN** | IPsec VPN | XML

Connection Name:

Description:

Remote Gateway:

+ Add Remote Gateway

Customize port:

Enable Single Sign On (SSO) for VPN Tunnel

Client Certificate:

Authentication: Prompt on login Save login

Username:

Do not Warn Invalid Server Certificate

! Enabling this option will allow you to connect to untrusted sites where the VPN connection will not be secure. If connected to untrusted sites, attackers could steal your information such as credentials, credit card details, etc. Please contact your network administrator or support team for assistance.

Cancel **Save**

STEP 4 – Once the configuration is saved you will get to this screen.

Enter the password you were provided (this would typically be a different password than your computer password) and click connect. If all goes well, you will connect to your remote office and will get this screen.

If something goes wrong and it fails to connect, please take notice of the percentage that it failed at and call our support line.

When you are ready to disconnect from remote office, go to the system tray, pick the fortiVPN icon and select disconnect.
